

# Sky Tonight™

Dive into the world of astronomy with **Sky Tonight™**, a new stargazing app from the creators of Star Walk™! Based on more than a decade of experience and thousands of reviews of stargazers from all over the world, **Sky Tonight™** is designed to meet all the needs and wants of astronomy enthusiasts.

## **Main features of Sky Tonight™:**

- *Real-time sky map:* Simply point your device at the sky to see the names of stars, constellations, or any other celestial objects.
- *Augmented reality mode:* Enjoy illustrations of constellations, bright stars, planets and other objects towering over your current location.
- *Bottom navigation bar:* Get most out of the app and quickly open the desired section or make the required action just with one hand.
- *Flexible search:* Quickly find any heavenly body you're interested in and easily navigate across different types of objects and events.
- *Interactive object trajectories:* Drag a star or a planet along its trajectory to learn at what time it will get to a particular position in the sky and plan your astronomical observations.
- *Astronomy calendar* with the list of objects and upcoming events, weather forecast and stargazing index to help you decide if your chosen date is suitable for observation.
- *Fully customizable event reminders* for any time and date: Never miss spectacular astronomical events you'd like to witness.
- *Extensive astronomical information about celestial objects:* Tap on the object's name to learn interesting facts about it.

In **Sky Tonight™**, all features and objects are available for free. The only limitation is partially blurred content – without premium access, only the first three interface items in each category are available.

**Sky Tonight™** is a multifunctional tool for exploring the night sky, planning your observations, and more. Exploring the universe has never been so easy — just point your device at the sky and enjoy!
